

DESCRIPTION

Many years of in-field experience have shown the necessity of more and more efficient controls on the contamination level of hydraulic fluids and fuels.

With this goal uppermost in its mind, and thanks to sophisticated design patterns and the use of cutting-edge materials and technologies, FAI FILTRI has engineered a complete series of spin-on filters, in different models and sizes, designed to meet a wide array of filtration and operating requirements, in order to allow a more effective control of contamination levels in hydraulic, lubricating, engine circuits, etc.

The CSG series filtering cartridges, featuring standard American design and flanging (interchangeable with the main manufacturers of American filters), give their best performances when fitted into hydraulic systems, earthworks machineries, agricultural machines and generally speaking into any movable/ mobile machines with pressure peaks up to 12 bar.

The fundamental characteristic of these elements is the possibility, for any clogged filter, to be easily replaced, by a quick and clean procedure, condition that has to be considered of great importance in working contexts where highly deteriorated environmental conditions usually occur.

They can support flow rates up to 250 l/min.; each element can be equipped with a by-pass valve.

Specifically, FAI FILTRI spin-on cartridges, equipped with new-generation "A" filtering media, can grant very high standards of performance even in the hardest conditions.

"A" type elements with absolute filtration power of 3, 6, 10, 25 micron ($\beta x \geq 200$), are formed by inorganic impregnated and resin bonded inert micro-fibers, supported upstream and downstream. The result is a very compact filtering core which ensures the resistance of the media itself to deformation, distortion and strain ,preventing any contaminants to get released, thus improving filtering performances and allowing contaminants to accumulate efficiently, also in the event of phenomena such as high differential pressure and water hammering derived from cold starts and discharge flow rates.

The above mentioned features make the FAI FILTRI spin-on filters consistent with the use of hydraulic, lubricating oils, fuels, glycol water, emulsions and most synthetic fluids

TECHNICAL DATA

MATERIALS

- □ Tropicalized, galvanized stamped plate flange
- Sinned and painted sheet steel vessel
- Perforated/drilled supporting pipes and galvanized steel end-caps

CARTRIDGES PRESSURE VALUES

Max. operating pressure: 12 bar

Impulse test in compliance with ISO 3724: from 0-12-0 bar 1Hz 50.000 min. cycles

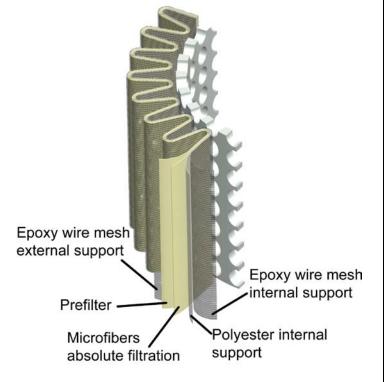

FILTERING ELEMENTS

"P" 10 and 25 nominal micron made of $\beta x > 2$ impregnated cellulose fibers

"A" 3, 6, 10, 16 and 25 absolute micron made of $\beta x \geq 200$ reinforced, inorganic fibers with polyester protections

"M" 60 90 nominal micron made of wire net

New generation "A" filtering elements structure

RETENTION POWER

In compliance with ISO 4572 Multi-pass test method

Filter element	Dimension for β (μm) Value				Filtering rapport			Final ∆P
	β ≥ 2 50 %	β ≥ 20 95 %	β ≥ 75 98,7%	β ≥ 200 99 ,5%	eta_2	β ₁₀	β20	(bar)
A03	-	2	2.4	3	20	>10000	>10000	7
A06	-	3	4.6	6	8	>2000	>10000	7

TESTS CARRIED OUT ON FILTERING ELEMENTS

Filtering elements differential collapsing pressure tested in compliance with ISO 2941:

"P" Type"A" and "M" Types10 bar

Resistance to axial deformation tested in compliance with ISO 3723

Manufacturing conformity and determination/assessment of the first bubble point in compliance with ISO 2942

FILTERING SURFACES

Туре	Type P10/P25		M60/M90

BY-PASS VALVE

Type -1- setting 0,5 bar

Type -2- setting 1 bar

Type -3- setting 1,75 bar

Type -4- setting 2,5 bar

GASKETS

Buna-N "A" type gaskets Viton "V" type gaskets

COUPLINGS

For the different couplings see order forms

Specifically on request (custom-made)

OPERATING TEMPERATURES

From -25°C up to +110°C

For different temperatures please contact our technical department

FLOW RATES

From 35 up to 150 l/min

N.B.: Choose the cartridge according to the filtration and to the recommended pressure drop

PRESSURE DROP

Curves are applicable to mineral oil with a dynamic viscosity of 30 mm²/sec. (cSt). ΔP changes along with the values of dynamic viscosity according to the following formulas:

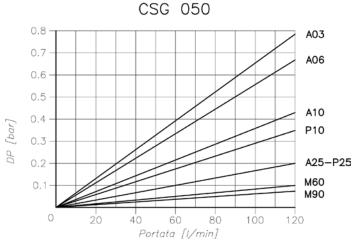

① Dynamic viscosity variations ≤5

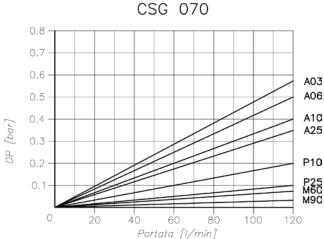

$$\Delta P = \frac{v1}{v} \Delta P$$

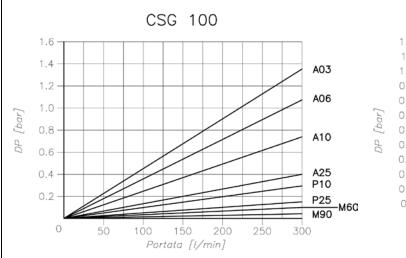

② Dynamic viscosity variations >5

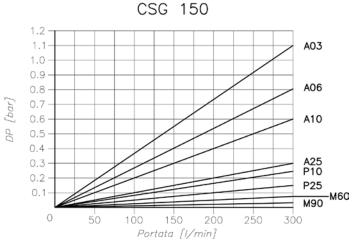

$$\Delta P1 = \frac{\frac{v1}{v} + \sqrt{\frac{v1}{v}}}{2} \Delta P$$

In both formulas ΔP stands for the pressure loss calculated on the curves, \mathbf{v} stands for the reference dynamic viscosity (30 mm²/sec); $\Delta P1$ is the pressure loss to be calculated and $\mathbf{v1}$ stands for the actual dynamic viscosity of the tested fluid.

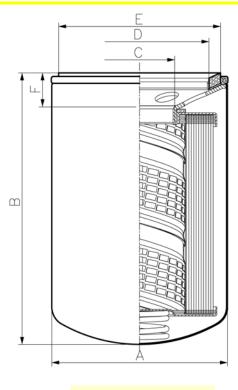

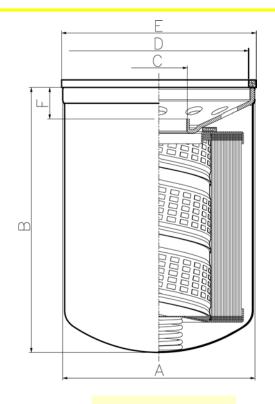

DIMENSIONAL INFORMATION
